

Simplify, secure and automate managed file transfer processes

Need your critical file transfers to run smoothly and securely?

The **GoAnywhere™** managed file transfer (MFT) solution easily automates and secures mission-critical file transfers for the enterprise, providing centralized control and visibility for both batch and ad-hoc transfers. GoAnywhere provides strong encryption and detailed audit trails to help organizations meet strict compliance regulations like HIPAA, PCI DSS, SOX, GBLA and FISMA, as well as state privacy laws.

GoAnywhere Director™ streamlines and secures the exchange of data with customers, trading partners and enterprise servers. GoAnywhere Director is a flexible solution that connects to almost any server or data source using a wide variety of standard and secure protocols.

GoAnywhere Services™ allows trading partners (both internal and external) to securely connect to your system and exchange files within a fully managed and audited solution. Popular file transfer and encryption standards are supported without the need for proprietary client software. A Secure Mail module with an Outlook plug-in is also available to make ad-hoc file transfers more convenient and secure.

GoAnywhere Gateway™ acts as an enhanced reverse proxy that provides an additional layer of network security. It allows trading partners to connect to GoAnywhere Services without having to open incoming ports into the private network or store sensitive information in the DMZ. It also serves as a forward proxy for processing file transfer requests from GoAnywhere Director.

 **FIPS 140-2 Compliant Encryption is Available**

- Installs to Windows, Linux, IBM i, UNIX, AIX, HP-UX and Solaris
- Supports FTP/S, SFTP, SCP, HTTP/S and AS2 file transfer protocols
- Offers an intuitive browser-based interface for remote administration
- Generates detailed audit logs and alert messages
- Provides clustering for load balancing and active-active high availability

GO ANYWHERE™ Director

- Connects to FTP/S, SFTP, HTTP/S, AS2, MQ/JMS, SMTP, POP3 and IMAP servers
- Secures transmissions with Open PGP, SSL, TLS, SSH or ZIP/AES encryption
- Compresses/packages files with ZIP, GZIP or TAR
- Connects to databases including DB2, SQL Server, Oracle, Informix, MySQL, Sybase and Derby
- Interfaces with customer applications and programs
- Reads/writes Excel, XML, CSV, Delimited text and Fixed Width documents
- Centrally logs all file transfer activity

GO ANYWHERE™ Services

- Allows your trading partners to connect to your system through FTP/S, SFTP, HTTP/S and AS2 protocols
- Secures transfers with SSL, TLS or SSH encryption
- Offers web client for browser-based file transfers
- Sends email notifications when files are available
- Provides extensive security controls with granular user permissions, blacklists and whitelists
- Includes key and certificate management
- Processes files automatically with triggers
- Generates detailed audit logs

GO ANYWHERE™ Gateway

- Provides both reverse proxy and forward proxy services
- Allows sensitive data files and user credentials to be stored in the private network, rather than the DMZ
- Protects private network by not requiring inbound ports to be opened
- Hides locations and identities of internal systems
- Supports FTP/S, SFTP, HTTP/S and AS2 protocols
